ABOUT ME

I am a Java Backend Developer with 4 years of experience in backend development. I am proficient in Java language and have expertise Quarkus, Spring Boot, Hibernate, JUnit, etc. My focus is on building and refactoring RESTful APIs, optimizing database performance, and ensuring secure data handling. I am interested in expanding my knowledge in various approaches to building web services, other programming languages, and other frameworks.

EXPERIENCE

JUNIOR JAVA BACKEND DEVELOPER

PT Barrans Global Mandiri

OCTOBER 2019 – MAY 2022

- Assisting in the creation of API resources, such as CRUD operations, under the supervision of a senior developer and backend leader.
- Developing admin website features that will be used by an internet service provider company, including managing customer orders, reporting features, creating new subscription internet products, and more.
- Developing features to assist MyRepublic customers in subscription package changes, complaint registration, technician appointments, and other related services.
- Performing data migration from the legacy core database.
